

## Updating Your Ribbons or Medals *Frequently Asked Questions*

### ■ Can ribbons or medals be updated?

In general, yes. Our skilled technicians can add devices/attachments and ribbons to existing UltraThin Ribbon sets.

Devices and attachments can be updated on existing Medal sets and medallions can be re-used when rebuilding or adding additional medals

### ■ Is it cost effective to add to an existing set versus buying new?

It depends on the modifications needing to be made. The fewer ribbons that need to be repositioned the more feasible and cost effective it is to add awards. Adding awards to the bottom of the set is more often not cost effective because all or most of the ribbons need to be moved to allow space for the new award.

### ■ If it is *not* cost effective to add new ribbons to an existing set, it is often possible to realize some cost savings by re-using the existing devices from the old set.

### ■ There are times that we will advise against adding to an existing set because of the age or current condition of the ribbons.

### ■ UltraThin will make every effort to provide you with the highest level of expertise and care at the most cost-effective price.

### ■ Can UltraThin update a set that was manufactured by another company?

We are happy to add devices to any set that we receive regardless of origin. However, we do not add ribbons to non-UltraThin sets, the Original UltraThin process is not compatible with the technique's other services use. The exception being restorations of awards in the style that matches the era in which they were received.

If we are not confident about maintaining the integrity of the set, we will return it unaltered.
